PROFESSIONAL SUMMARY

Self-driven software engineering student who builds backend systems, develops REST APIs, integrates AI services, and deploys to cloud environment. Has shipped three production web applications using Java, JavaScript, Spring Boot, Node.js, and SQL databases, including one deployed to a self-provisioned cloud VPS. Comfortable working alone or collaborating with engineers and a fast learner who consistently solves problems by building.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL

Backend & APIs: Spring Boot, Spring Data JPA, Node.js, Express.js, REST API development, OpenAI API integration

Frontend: React, Thymeleaf, HTML/CSS, Vanilla JavaScript

Databases: MySQL (design, normalization, integrity constraints), TiDB

Cloud & Tools: DigitalOcean VPS, Docker, Render, Git/GitHub, Postman, Junit.

PROJECTS · All live at ahsmart.dev

UMT Campus Marketplace Platform · *Spring Boot · MySQL · REST APIs · OpenAI API · Docker · DigitalOcean VPS*

- Built a full production marketplace with backend APIs for product listings, order lifecycle and buyer-seller chat.
- Integrated OpenAI API as an AI-powered fraud detection layer. which mark as approved/suspicious before publishing.
- Designed a normalized 3NF MySQL database with integrity constraints, handling users, products, orders, and chat data.
- Engineered 3-role RBAC (Buyer, Seller, Admin) with admin-controlled seller verification workflow to prevent fraud.
- Deployed to a self-provisioned DigitalOcean cloud VPS via SSH. Configured Linux server, installed dependencies, and launched without managed hosting.

WanderLite Smart Tourism Dashboard · *Node.js · Express.js · JavaScript · REST APIs · Leaflet.js · Render*

- Developed backend API routes that integrate 3 external APIs (OpenWeather, Frankfurter, Geoapify) with a fallback to Overpass API for reliability.
- Secured all API keys in backend Express routes, keeping credentials hidden from the frontend. Linked API data to an interactive map UI. Deployed live on Render.

INDEPENDENT WORK & EXPLORATION

- Took ownership of building and deploying multiple projects end-to-end, extending beyond standard coursework requirements.
- Self-taught Docker containerization, Linux server administration, and cloud deployment (DigitalOcean VPS) through hands-on experimentation.
- Experimented with external API integrations (OpenAI, OpenWeather, Frankfurter, Geoapify) across multiple projects, building fallback strategies and secure backend routing.

EDUCATION

B.Sc. (Hons) in Software Engineering

Universiti Malaysia Terengganu (UMT) · 2023 - 2027 · CGPA: **3.56** · Dean's List x3 · Available from Aug 2026
