PROFESSIONAL SUMMARY

Software engineering student with hands-on project experience and strong interest in collaborative software development. Comfortable working within software development lifecycles (SDLC), communicating progress, solving problems, and adapting quickly to new technologies and team environments. Passionate about building reliable systems, learning continuously, and contributing effectively within engineering teams.

TECHNICAL SKILLS

Languages: Java, Node.js, Python, SQL.

Backend & APIs: Spring Boot, Spring Data JPA, Express.js, FastAPI, REST API development, OpenAI API integration.

Frontend: React.js, Thymeleaf, HTML/CSS, JavaScript.

Databases & Cloud: MySQL, TiDB database hosting, DigitalOcean VPS, Docker, Render, Git, GitHub, Postman.

IOT & Embedded: Raspberry Pi Pico, sensors, ThingSpeak.

PROJECTS

UMT Campus Marketplace Platform · *Spring Boot · MySQL · REST APIs · OpenAI API · Docker · DigitalOcean VPS*

- Built a full production marketplace with backend APIs for product listings, order lifecycle and buyer-seller chat.
- Built semantic product recommendation system using OpenAI embeddings and cosine similarity.
- Integrated OpenAI API as an AI-powered fraud detection layer. which mark as approved/suspicious before publishing.
- Designed a normalized 3NF MySQL database with integrity constraints, handling users, products, orders, and chat data.
- Engineered 3-role RBAC (Buyer, Seller, Admin) with admin-controlled seller verification workflow to prevent fraud.
- Deployed to a self-provisioned DigitalOcean cloud VPS via SSH. Configured Linux server, installed dependencies, and launched without managed hosting.

WanderLite Smart Tourism Dashboard · *Node.js · Express.js · JavaScript · REST APIs · Leaflet.js · Render*

- Developed backend API routes that integrate 3 external APIs (OpenWeather, Frankfurter, Geoapify) with a fallback to Overpass API for reliability.
- Secured all API keys in backend Express routes, keeping credentials hidden from the frontend. Linked API data to an interactive map UI. Deployed live on Render.

EDUCATION

B.Sc. (Hons) in Software Engineering

Universiti Malaysia Terengganu (UMT) · 2023 - 2027 · CGPA: **3.56** · Dean's List x3 · Available from Aug 2026.

Courses: Cybersecurity, Networking, Software Architecture, Data Structures and Algorithm, Software Testing, Intelligent Systems.

INDEPENDENT WORK & EXPLORATION

- Took ownership of building and deploying multiple projects end-to-end, extending beyond standard coursework requirements.
- Self-taught Docker containerization, Linux server administration, and cloud deployment (DigitalOcean VPS) through hands-on experimentation.
- Experimented with external API integrations (OpenAI, OpenWeather, Frankfurter, Geoapify) across multiple projects, building fallback strategies and secure backend routing.
